# Sarah-Jane case

St George's University, London

[http://www.elu.sgul.ac.uk/virtualpatients/examples/sarah\\_jane/SJP\\_h\\_21\\_NT\\_HM.html](http://www.elu.sgul.ac.uk/virtualpatients/examples/sarah_jane/SJP_h_21_NT_HM.html)

**“The pictures are better  
on the radio.”**

**Alistair Cooke**

# Cues in the environment

You go to see Sarah-Jane. OK you finish the cup of tea and the documentary first. It takes 15 mins to drive to her house, in a rather isolated part of the catchment area. When the door is answered, her mother, Ruth takes you inside and into the lounge. The whole house is a mess, with clothes, papers, bills and dirty plates strewn around.

The baby is sitting in her bouncer chair. Next to her is the dog, asleep on the floor. It smells. There is another child, maybe 3 years old watching TV in the room.

You ask the mother some questions and find out these details:-

She had a runny nose yesterday.

Her cough started this morning. It seems tickly - it keeps annoying her.

She vomited once this afternoon.

There has been no diarrhoea or temperature.

She has been well since discharge from hospital 3 months ago.

What would you like to do?

Examine her Ask more questions Treat her Send to hospital Review in the morning

# **Uses of Virtual Patients**

- **Simple case presentations**
  - **Shorter rather than longer**
- **Self-directed learning**
- **Small group discussions**
- **Flipped-classroom approach**
- **Assessment of problem solving**

# PINE Library

## PINE: Northern Hike

**Northern Hike**

It is early summer, a beautiful sunny day but cool. You are a medical student and have made plans with colleagues that you have met on a summer rotation to hike the Cup and Saucer trail on Manitoulin Island.

The trail starts as an easy to moderate uphill climb through hardwood bush, but does involve some non-technical but light climbing to reach the summit of the escarpment. There is a short adventure trail option that has the most challenging terrain. Parts of the trail are rocky with loose scree. The trail down is similar. The total distance of the route chosen is 18k.

Your new friends call at 1:00 and ask you to organize what they would need to hike on the hike. Louisa, a physiotherapy student, is bringing a water bladder pack. Mark, a nursing student, wants to carry very little he takes great pride in minimalist packing.

What would you choose to take on this hike? Choose as many "kts" as you think appropriate

## PINE: Cheerful Charlie

**Midnight In A Small Town Hospital's Emergency Room**

It is midnight in a small town hospital's Emergency Room department where you, a family physician, have been working since 5:00 pm that evening, and are looking forward to the end of your shift.

What Do You Want To Do Now?

As you are contemplating your thoughts, a young man in a dirty t-shirt comes in complaining of pain in his right hand.

## PINE: Team Leader or Team Bully

**You Are Approached By Eric, The Team Physiotherapist**

The two of you often don't see eye to eye. He tells you that during the meeting, concern was expressed about Mrs. Potts' ability to return home without 24 hour supervision.

The team decided that because you have the "best rapport" with the client, that you should be the one to go home for a whole day with Mrs. Potts to "see how she does". You can't believe the team made this decision on your behalf when you weren't even present! You also wonder if you're the best qualified person to do the home visit with Mrs. Potts.

What would you like to do?

Complain To The Unit Manager  
Call Your Regulatory College's Practice Advisor

## PINE: Patient Centred Care

**Seek Out The Family To Find Out What's Going On**

The family wants M. Dubois discharged immediately as he does not like to be in hospital. What do you do next?

Discharge M. Dubois From Physio Caseeload  
Review The Chart  
Try Something Else  
Tell The Family That You Will Relay Their Wishes To The Team

## PINE: Brokeback Trapline

**Look Inside the Cabin**

As you go to look inside the cabin you decide to test the door for heat. Once you feel that it is still cold, you contemplate going inside the cabin. However, you notice that there are bear claw marks on the door, which makes you hesitant about your next move. What should you do now?

Push the Door Open and Go Inside  
Call Out "Hey Goodie, you in there buddy?"  
Call 911 on Your Cellular Telephone  
Do Not Go In Because There Might Be a Bear Inside

## PINE: Challenges in Community Care

**You Are Tanis, A Physiotherapist Working With An Agency Contracted To Provide Home Health Care Services**

You have worked with this agency for 5 years. The majority of your caseload is older adults who are experiencing difficulty with mobility. Today you have received a referral for Mrs. Blinaski, an 85 year old woman who lives alone. The referral is asking you to perform a mobility assessment within the next 2 days for this woman who has been experiencing falls. The referral indicates that an OT referral is also pending for a home safety assessment. It also indicates that social work services are currently in place. What would you like to do as the first step in responding to this referral?

Contact Mrs. Blinaski To Schedule An Appointment Independently  
Contact The Occupational Therapist To Discuss Performing A Combined Assessment  
Contact Maria The Social Worker To Obtain Background Information

## PINE: A Stroke of Luck

**Start**

It has been another stressful day at work. On the way home, you picked up the kids from soccer - they're fighting again. It seems like that's all they do these days.

Home Again

# Assessment of problem solving

# Situational Judgment Testing

- Better for non-clinical  
eg ethics
  - <http://demo.openlabyrinth.ca/renderLabyrinth/index/382>

## START

Welcome to **Virtual Residents**, a 'game' inspired by many years of training preceptors, teachers, or mentors many have experienced and brought to challenges. With these scenarios in mind, we would like to introduce you to **students and teachers**. Using Situational Judgment Testing (SJT) we will present you with scenarios. For these, there is often no single right answer.

For more information about how to play this different style of cases, please do not use 'Drag & Drop' responses before, check out our 1 minute video here.

## Drag & drop questions in OLab3.mp4

### START

This is to show what can be done with Drag & Drop Questions.

Use your mouse to drag each of these 3 items into what you think is the correct order. Do not just click on them.

Note that if you do not change the order of the items, nothing is recorded.

Which action is most important?

Finish the case

Make the effort

Now click the [Evaluate] button below.

Author note: Case authors will need to keep in mind that the User at least finds something to change about the order, or else no response is recorded.
